This quote was accepted on Oct 01, 2025.

Item	Quantity	Unit Price	Amount (USD)
Next-Generation Sequencing ----- - Instrument: PacBio - PacBio Revio Cell - Read length: CCS reads at about 11-25kb - Pricing unit: per-cell - Number of samples: 1 - Estimated output: Up to 75 Gb* of >Q20 reads - Estimated coverage/sample: Up to 187X (on genome size of 0.4 Gb) - Guaranteed output: 50Gb >Q20 data	1.00	\$2,045.00	\$2,045.00
This is to run the 8M chip on the PacBio Revio for 24 hours.			
* Estimates based on manufacturer specs.			
Library Preparation ----- - Library type: PacBio - DNA (whole genome) - Library prep kit: PacBio DNA Template Prep - Pricing unit: per-sample HiFi library construction for running on the Revio for 24 hour data collection. DNA is sheared using a Megaruptor. Size selection is performed on a Blue Pippin	1.00	\$552.50	\$552.50
DNA extraction and QC ----- Extraction will be performed from sufficient tissue to yield 5–10 µg of high molecular weight (HMW) DNA. The project will proceed only upon obtaining DNA of adequate quality, defined by a NanoDrop A260/280 ratio of approximately 1.8 and an A260/230 ratio greater than 2.0.	1.00	\$82.87	\$82.87
Total (USD):			\$2,680.37

Other details and terms:

Estimated turnaround time: 8 days

Guaranteed turnaround time: 14 days - See [Genohub's TAT policy](#)

Unless otherwise specified in the quote, customer is responsible for all shipping charges.

All Genohub projects come with:

- Enforced quality guarantees based on our [Quality Policy](#)
- Enforced [turnaround time guarantee](#)
- **3 months of free unlimited storage** and fast and secure data transfer via dedicated Genohub data buckets
- Active supervision and support by Genohub
